Sir:

Before examination of the above-identified application, please amend the application, as follows:

IN THE CLAIMS:

Please AMEND the pending claims, in accordance with the following:

1. (AS ONCE AMENDED HEREIN) A data conversion method for displaying an image, comprising conversion of original frame data indicating gradation of a pixel into display frame data defining a light emission timing of a display element in a display frame period, the conversion, comprising:

determining a light emission waveform in accordance with display frame data of plural frames containing a current frame and a previous frame;

performing Fourier expansion of an error between the determined light emission waveform and a target light emission waveform defined by the original frame data corresponding to the determined light emission waveform; and

setting the display frame data of the current frame so that a sum of error components, with respective weights that are obtained by weighting each Fourier component, is minimized.
